

Kitchen Deodorization System

Thinking about
good food?

Worrying about
smell?

Applications

POSITIVE USER RESPONSES FROM WORLDWIDE

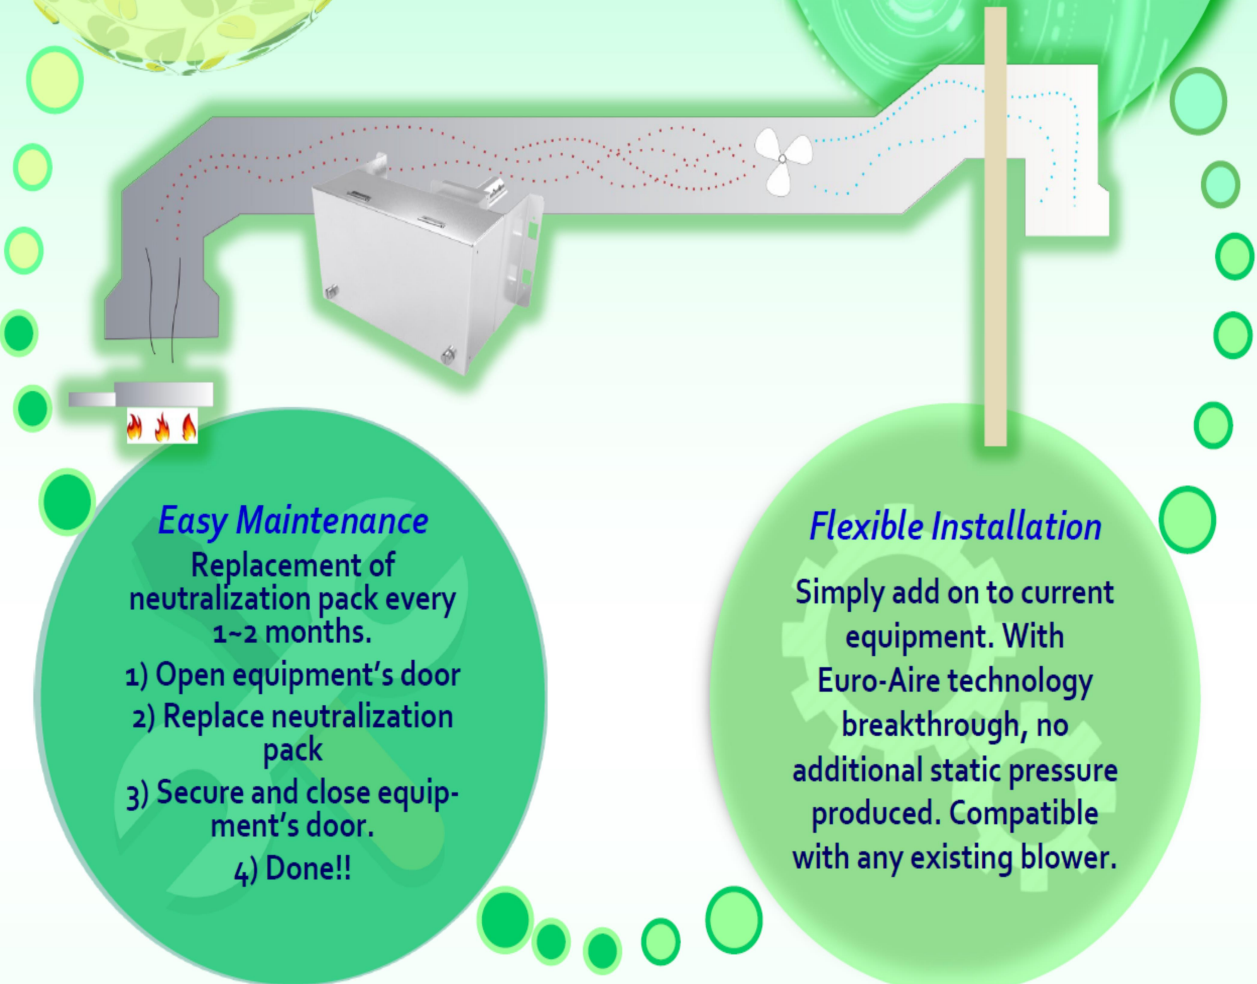

Minimise smelly smoke emissions problem using breakthrough technology of neutralization, without the need to replace new equipment or produce additional static pressure.

Environmental Friendly

Reactants created using plants extract, neutralizing odors through active chemical process.

Conventional Breakthrough!!

Using odor neutralization process instead of conventional odor masking (which do not solve the problem in long

Easy Maintenance

Replacement of neutralization pack every 1~2 months.

- 1) Open equipment's door
- 2) Replace neutralization pack
- 3) Secure and close equipment's door.
- 4) Done!!

Flexible Installation

Simply add on to current equipment. With Euro-Aire technology breakthrough, no additional static pressure produced. Compatible with any existing blower.

Installation Procedure

- Install before the suction fan, along the vacuuming air duct.
- Open up a hole (roughly 10x10CM) for inserting the Kitchen Deodorizing System into the duct.
- Once properly inserted, stabilize the equipment housing with screws or strap to secure the device firmly onto air duct.
